Introduction

- Technical Architect @ Harman, A Samsung Company
- Area of Expertise: Cloud, Distributed computing
- Area of Interest: AI/ML and IoT
- Location: Bangalore, India
- Member: .Net Foundation

Agenda

- Basics of Sound
- Sound Classification
- Exploratory Data Analysis
- Framework and Tools
- Classification using ML.Net
- Demo

Basics of Sound

- **Sound** : A pressure wave created by a vibrating object.
- **Amplitude** : Measure of height of a wave or loudness
- **Frequency** : Total # of waves produced per second. Human(20Hz – 20KHz)
- **SampleRate** : How many times per second a sound is sampled. 44.1KHz, 96KHz
- **BitRate** : Amount of data transferred into audio. 8-bit, 16-bit, 24-bit.
- **Channels** : Represents spatial experience of sound. Mono/Stereo/Surround
- **FFT** : Fast Fourier Transform. A way to convert signal from time to frequency domain
