Introduction

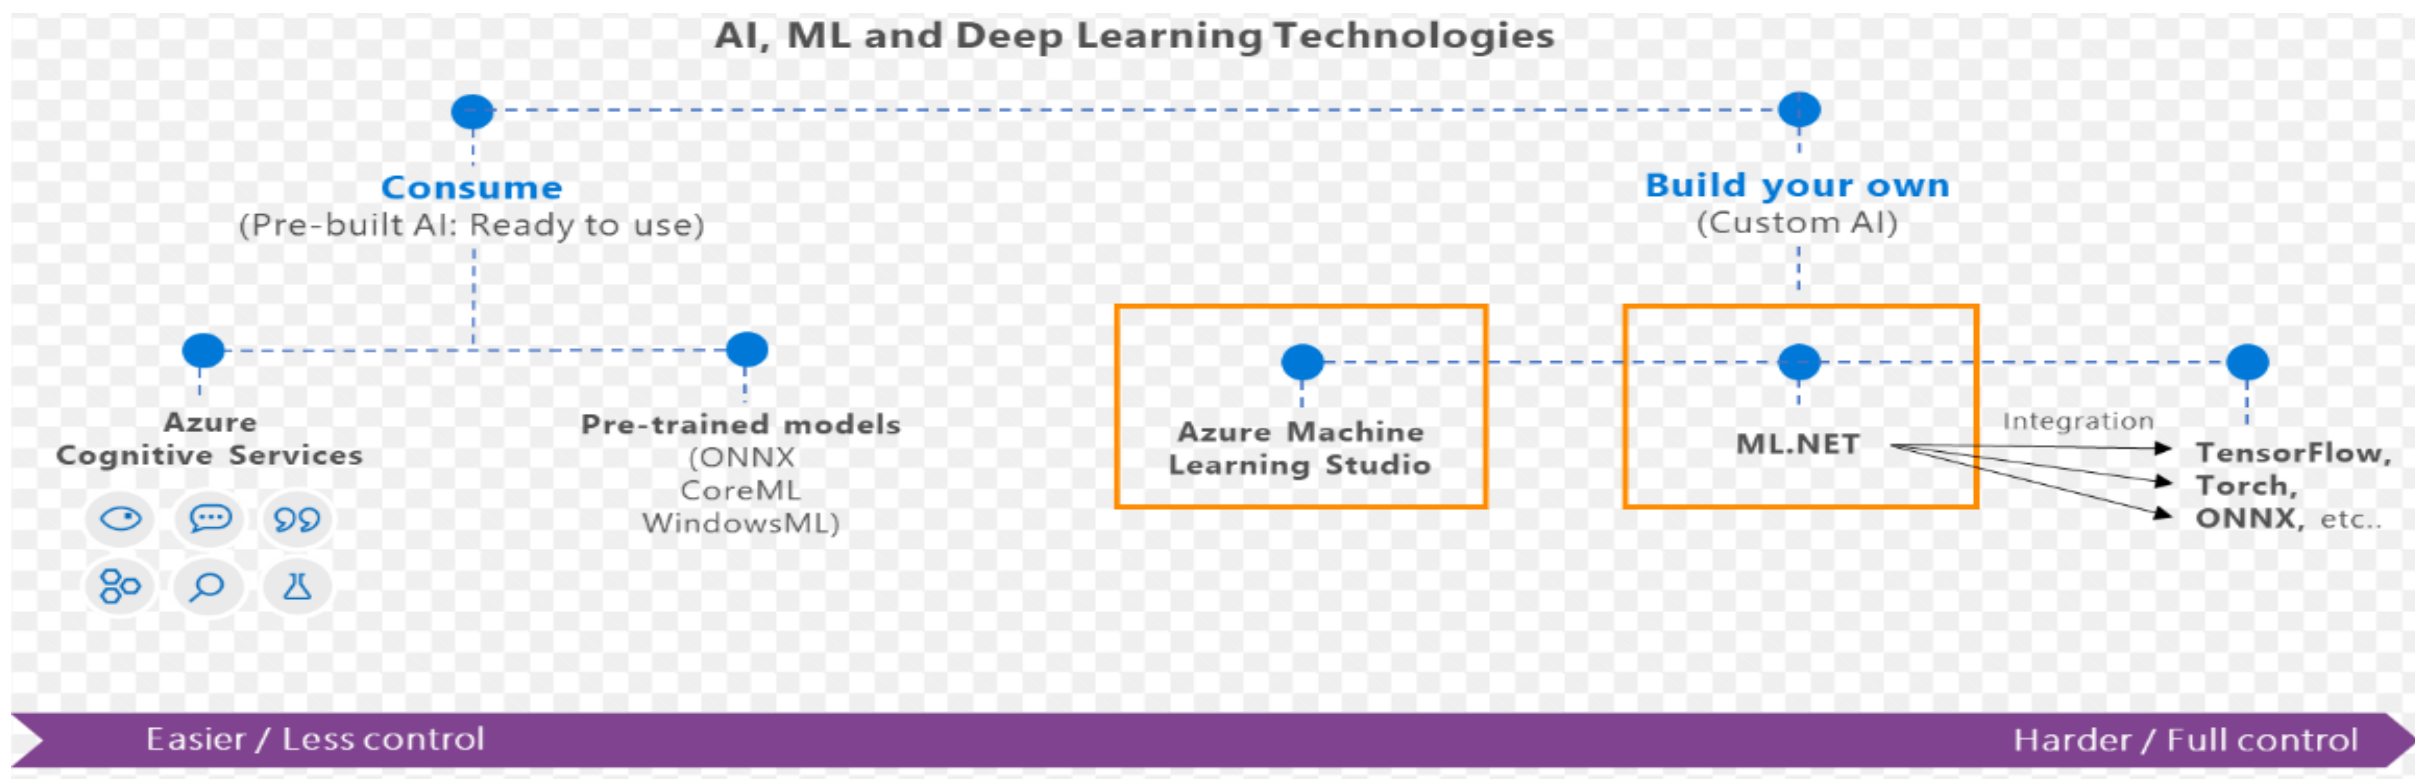

- Technical Architect @ Harman, A Samsung Company
- Area of Expertise: Cloud, Distributed computing
- Area of Interest: AI/ML and IoT
- Location: Bangalore, India
- Member: .Net Foundation

Agenda

- What is ML.Net
- Basics of Sound
- Sound Classification
- Exploratory Data Analysis
- Framework and Tools
- Classification using ML.Net
- Demo

What is ML.Net ?

- ML Framework from Microsoft for developing custom AI/ML applications.
- Originated in 2002 as part of Microsoft Research Project

What is ML.Net ?

ML.NET

Machine Learning framework made for .NET developers

Build-your-own

Build your own custom models by writing C# or F# code

Developer focused

ML.NET provides just the right amount of productivity and control

Extensible

Tap into other machine learning toolkits with the rich extensibility model like TensorFlow

Proven

ML.NET has been used internally in products like Office and Bing for years

Open source and Cross-platform

Runs on Windows, macOS and Linux and developed in the open on GitHub

<https://github.com/dotnet/machinelearning>

ML.Net-Proven at scale, Enterprise Ready

-  **Bing Ads** (Ad Predictions)
-  **Excel** (Chart Recommendations)
-  **Power Point** (Design Ideas)
-  **Windows 10** (Windows Defender)
-  **Azure Stream Analytics** (Anomaly Detection)

+ more

ML.Net-Possibilities

Sentiment Analysis

Forecasting

Issue Classification

Predictive maintenance

Image classification

Recommendations

Object detection

Customer segmentation

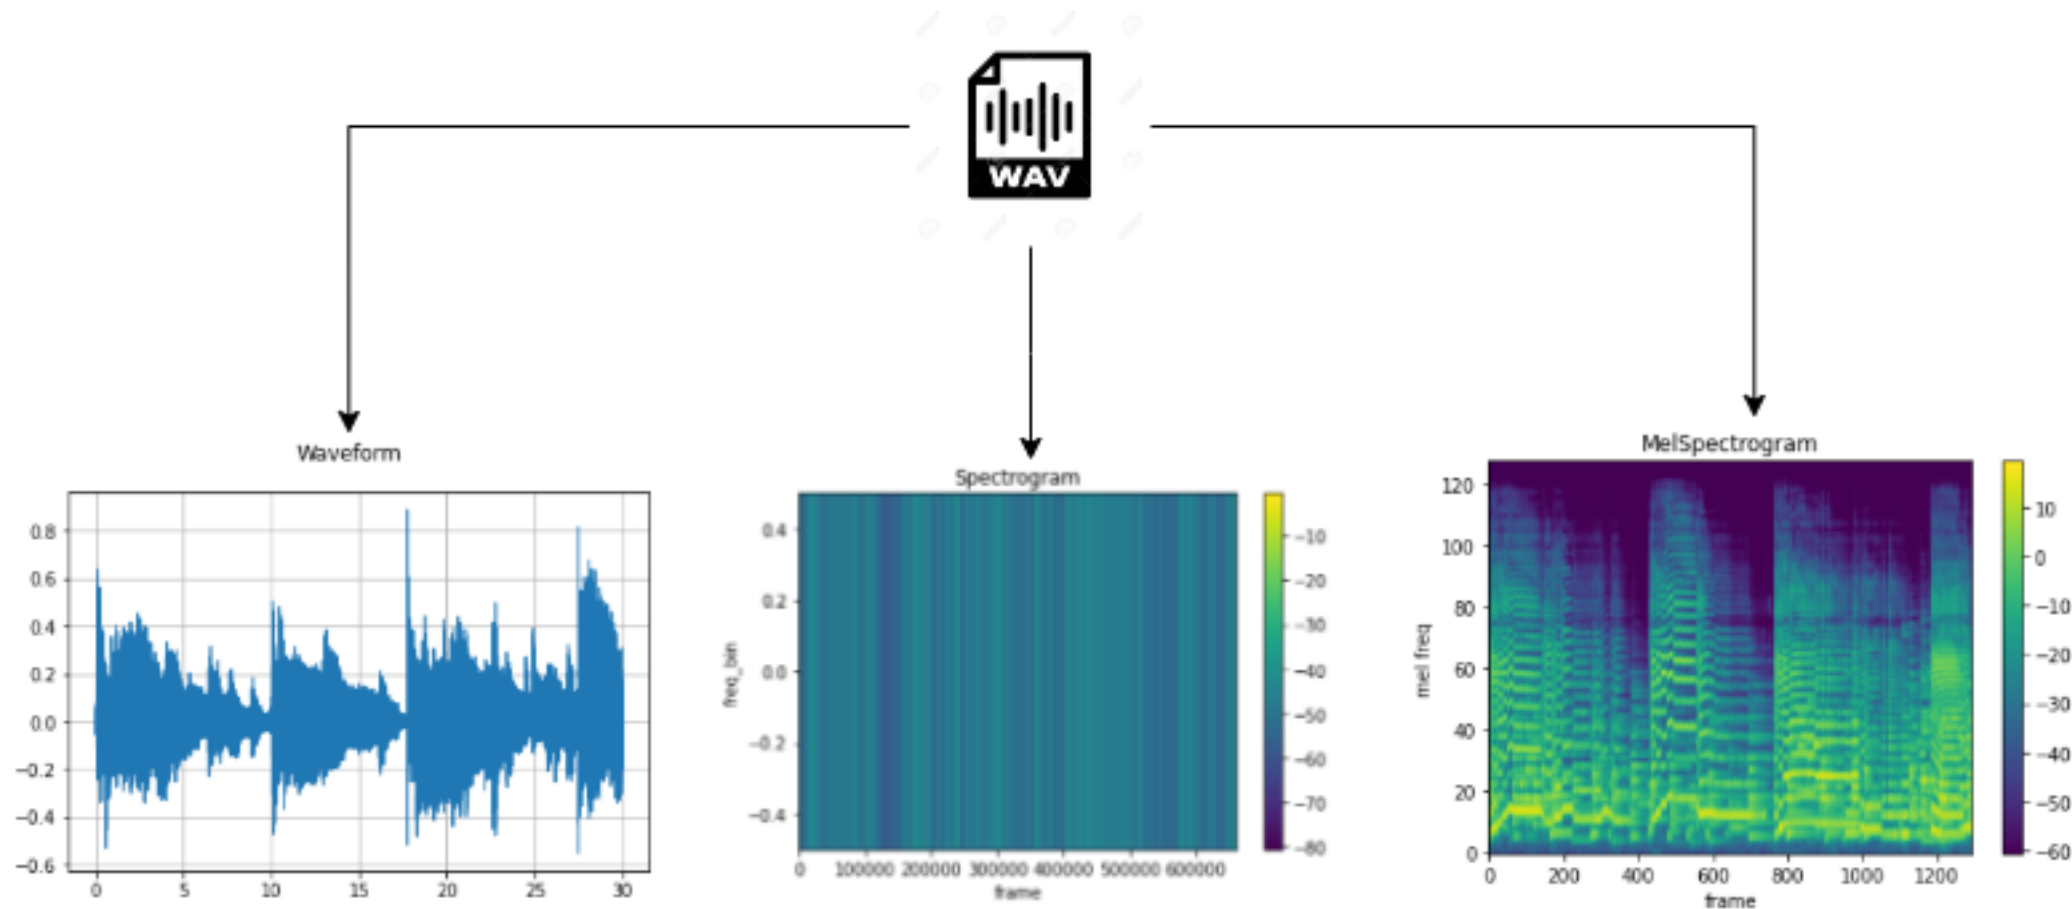

And more! Samples @ <https://github.com/dotnet/machinelearning-samples>

Basics of Sound

- **Sound** : A pressure wave created by a vibrating object.
- **Amplitude** : Measure of height of a wave or loudness
- **Frequency** : Total # of waves produced per second. Human(20Hz – 20KHz)
- **SampleRate** : How many times per second a sound is sampled. 44.1KHz, 96KHz
- **BitRate** : Amount of data transferred into audio. 8-bit, 16-bit, 24-bit.
- **Channels** : Represents spatial experience of sound. Mono/Stereo/Surround
- **FFT** : Fast Fourier Transform. A way to convert signal from time to frequency domain

Visual Representation
